ROHIT S PATIL

Software Engineer

Bangalore, Karnataka • rohitspatils2001@gmail.com • 7676194872

Objective

Full-Stack Software Engineer with 2.8 years of hands-on experience engineering scalable web applications across both **PHP / Laravel** and **MERN (MongoDB, Express.js, React.js, Node.js)** technology stacks. Strong expertise in solving enterprise operational bottlenecks, architecting multi-tenant SaaS applications, engineering secure RESTful APIs, and optimizing database performance. Passionate about clean code, robust debugging, and delivering reliable, high-availability business solutions.

Education

• Bachelor of Engineering
Jain College of Engineering and Technology Hubli (GPA: 8.04)

Course: Computer Science and Engineering
Graduation Date: May 2023

Experience

Bravery Engineering and Service Pvt Ltd | Bangalore, Karnataka

Software Developer | March 2024 – Present

- Engineered and maintained high-performance web applications leveraging both **PHP/Laravel** and the **MERN stack (MongoDB, Express.js, React.js, Node.js)** alongside MySQL and Bootstrap.
- Resolved complex business workflow bottlenecks by constructing interactive administrative dashboards, inventory control systems, and automated HR management platforms.
- Architected and integrated secure **RESTful APIs** across client and server layers, enforcing JWT/session authentication and granular role-based access control (RBAC).
- Eliminated database latency and server resource strain by optimizing **Laravel Eloquent** queries, indexing MySQL tables, and restructuring MongoDB aggregation pipelines, slashing response times by 35%.
- Standardized client-side and server-side form validations and CSRF safeguards to ensure data integrity and prevent security vulnerabilities.
- Constructed responsive, mobile-first user interfaces using **React** and **Bootstrap**, resolving cross-browser compatibility and layout inconsistencies.
- Partnered with QA and testing teams to troubleshoot production defects, perform root-cause analysis, and deliver stable, production-ready releases.
- Leveraged **Git** for version control, **Postman** for API validation, and browser developer tools for performance profiling and debugging.

Internship

ComSoft Technologies Pvt Ltd | Bangalore

Intern – Front-End / Full-Stack Development | (7 Months)

- Completed an intensive 7-month full-stack development internship with immersive practical training across **React.js, Node.js, Express.js, PHP (Laravel), MySQL**, and modern UI practices.
- Resolved frontend-backend integration issues by constructing clean REST endpoints in **Node.js/Express** and **Laravel**, linking dynamic UI components to database schemas.
- Diagnosed and eliminated UI rendering bottlenecks and state management bugs through systematic debugging, code refactoring, and self-testing.
- Collaborated with senior engineering mentors on live client modules, adopting industry-grade software design patterns and Git versioning standards.

Frontend Skills

- React.js, Redux, JavaScript (ES6+), HTML5, CSS3, Bootstrap, AJAX, jQuery, RESTful APIs, Responsive UI

Backend Skills

- PHP, Laravel, Node.js, Express.js, REST API Architecture, MVC, Middleware, Authentication & RBAC

Database Skills

- MySQL / SQL, MongoDB (Mongoose), Database Indexing, Query Optimization

Project

1) Multi-Client HR Tool | *PHP, Laravel, MySQL, Bootstrap, RESTful APIs*

- **Problem Solved:** Multiple client outlets faced frequent operational delays, data overlap, and manual record inaccuracies when managing employee attendance, assets, and departmental support requests.
- **Solution:** Architected a multi-tenant operational platform in **Laravel (PHP)** and **MySQL** with strict data isolation, outlet-level login authentication, and role-based access control (RBAC).
- **Functionality:** Automated the entire employee lifecycle—including profile directories, automated attendance logs, leave approval workflows, ticketing dispute resolutions, and equipment allocation tracking.
- **Impact:** Eliminated cross-tenant data leaks and reduced manual administrative processing effort by over 40% through real-time asynchronous dashboard updates.

2) Forecasting & Data Analytics Dashboard | *PHP, Laravel, MySQL, AJAX, jQuery, JavaScript, Chart.js*

- **Problem Solved:** Central kitchens experienced significant food wastage and frequent dispatch mismatches due to lack of predictive demand visibility across multi-outlet daily operations.
- **Solution:** Engineered a centralized demand analytics and forecasting system in **PHP (Laravel)** that models historical consumption patterns and calculates item-wise inventory requirements across outlets.
- **Architecture & Optimization:** Leveraged **Laravel Eloquent ORM**, scheduled Artisan tasks, and indexed MySQL queries to process sales velocity metrics; rendered dynamic visualizations via JavaScript, AJAX, and Chart.js without page reloads.
- **Impact:** Enabled central kitchen teams to prepare and dispatch optimal inventory quantities, significantly curbing perishables waste and ensuring zero outlet stockouts.

3) Shakti Innovation – Warehouse & Inventory Management | *MERN Stack (React.js, Node.js, Express.js, MongoDB), Redux*

- **Problem Solved:** Disjointed warehouse record-keeping led to recurring stock shortages, unmonitored stock-in/stock-out variances, and delayed procurement cycles during peak distribution.
- **Solution:** Constructed a real-time inventory tracking platform using **React, Node.js, Express**, and **MongoDB** with automated threshold triggers and end-to-end stock movement auditing.
- **Key Modules:** Delivered automated minimum-stock reorder alerts, instant Stock-In/Stock-Out reconciliation, and integrated financial valuation reports to support management forecasting.
- **Security & Optimization:** Structured Mongoose schemas for high-frequency inventory updates and implemented JWT-based role permissions to prevent unauthorized stock ledger alterations.

4) Thee Flour Girl (TFG Cafe) Web Platform | *MERN Stack (React.js, Node.js, Express.js, MongoDB)*

- **Problem Solved:** Manual order bookings and static menus limited customer engagement and resulted in operational bottlenecks during peak cafe rush hours.
- **Solution:** Engineered a dynamic **MERN** web platform featuring real-time menu management, digital reservation inquiries, customer testimonials, and direct social channel integrations.
- **Impact:** Accelerated mobile and desktop page speeds through modular React component design and efficient Node/Express asset handling, enhancing direct customer acquisition.

Strengths

- **Dual-Stack Proficiency (PHP/Laravel & MERN):** Seamlessly adapting between PHP/Laravel architectures and modern Node.js/Express/React ecosystems to build scalable solutions.
- **Problem-Centric Engineering & Debugging:** Adept at root-cause analysis, isolating performance bottlenecks in complex APIs, database queries, and distributed frontend state.
- **Cross-Functional Delivery:** Collaborating closely across UI/UX, QA, and backend engineering teams to transform business requirements into production-grade systems.
